

AMENDMENTS TO THE CLAIMS

This listing of claims replaces all prior versions, and listings, of claims in the application:

1 1. (Cancelled)

1 2. (Currently Amended) The test system of claim [[1]] 9, wherein the set of queries  
2 comprises a set of SQL statements.

1 3. (Currently Amended) The test system of claim [[1]] 9, wherein the ~~second~~  
2 analysis module is adapted to generate at least another recommended index from the set  
3 of candidate indexes.

1 4. – 6. (Cancelled)

1 7. (Previously Presented) A system comprising:  
2 at least one processor;  
3 a first module executable on the at least one processor to receive a set of queries  
4 and to provide a set of candidate indexes for the set of queries, the first module adapted to  
5 eliminate one or more candidate indexes based on one or more predetermined criteria;  
6 and  
7 an optimizer adapted to generate a recommended index from the set of candidate  
8 indexes,  
9 wherein the one or more predetermined criteria comprises a threshold change rate,  
10 the first module adapted to eliminate one or more candidate indexes having a change rate  
11 exceeding the threshold change rate.

1 8. (Original) The system of claim 7, wherein the first module is adapted to further  
2 eliminate a candidate index that is a subset of another candidate index.

1 9. (Previously Presented) ~~The test system of claim 1;~~ A test system comprising:  
2 at least one processor;  
3 an optimizer module executable on the at least one processor to receive  
4 environment information of a database system separate from the test system, the  
5 optimizer module to use the environment information to emulate an environment of the  
6 database system based on the environment information;  
7 a first module executable in the emulated environment and adapted to receive a  
8 set of queries and to provide a set of candidate indexes for the set of queries, the first  
9 module adapted to eliminate one or more candidate indexes based on one or more  
10 predetermined criteria; and  
11 an analysis module executable in the emulated environment and adapted to  
12 generate a recommended index from the set of candidate indexes.  
13 wherein ~~the second module comprises an analysis module and an optimizer,~~ the  
14 analysis module is adapted to apply a genetic algorithm, and the analysis module is  
15 adapted to cooperate with the optimizer module to generate the recommended index  
16 using the genetic algorithm.

1 10. (Previously Presented) The test system of claim 9, wherein the first module is  
2 adapted to provide the set of candidate indexes by identifying the candidate indexes from  
3 the set of queries and defining the set of queries in a database.

1 11. (Previously Presented) The test system of claim 10, wherein the analysis module  
2 is adapted to access the database to retrieve the candidate indexes.

1 12. (Previously Presented) The test system of claim 10, further comprising a  
2 validation module adapted to validate the recommended index in a database system.

1 13. (Previously Presented) The test system of claim 12, further comprising a user  
2 interface to receive user-specified one or more indexes, the optimizer adapted to generate  
3 a cost associated with a query plan based on the user-specified one or more indexes.

1 14. (Previously Presented) The test system of claim 13, wherein the user interface is  
2 adapted to receive a user-specified percentage value, the system further comprising  
3 another module to collect statistics based on a sample of rows of one or more tables, a  
4 size of the sample based on the user-specified percentage value.

1 15. (Previously Presented) The test system of claim 14, further comprising another  
2 module adapted to provide a hint on which table or tables statistics need to be collected.

1 16. (Previously Presented) The test system of claim 10, wherein the analysis module  
2 is adapted to access the database to retrieve the candidate indexes.

1 17. (Cancelled)

1 18. (Currently Amended) The test system of claim [[17]] 9, wherein the analysis  
2 module is adapted to submit candidate indexes to the optimizer module, the optimizer  
3 module adapted to determine the cost of one or more of the queries based on the  
4 candidate indexes.

1 19. (Currently Amended) The test system of claim 18, wherein the optimizer module  
2 is adapted to select the candidate index associated with a lowest cost as the recommended  
3 index.

1 20. (Currently Amended) The test system of claim [[1]] 9, wherein the set of queries  
2 comprises a workload captured from the database system, and wherein the database  
3 system is a parallel system having plural access modules, the environment information  
4 containing information regarding the parallel system and plural access modules.

1 21. (Currently Amended) The test system of claim 20, wherein the optimizer module  
2 is adapted to compute costs for the candidate indexes in the emulated environment of the  
3 database system.

1 22. – 39. (Cancelled)

1 40. (Previously Presented) An article comprising at least one storage medium  
2 containing instructions that when executed cause a system to:  
3 receive a set of queries;  
4 generate a set of candidate indexes from the set of queries;  
5 eliminate candidate indexes based on one or more predetermined criteria;  
6 invoke an optimizer to perform cost analysis of the candidate indexes; and  
7 use the cost analysis to select a recommended index for a database system,  
8 wherein eliminating candidate indexes based on one or more predetermined  
9 criteria comprises at least one of:  
10 eliminating candidate indexes that are changed with updates at a rate  
11 greater than a predetermined change rate threshold; and  
12 eliminating a candidate index that is a subset of another candidate index.

1 41. – 42. (Cancelled)

1 43. (Original) The article of claim 40, wherein the instructions when executed cause  
2 the system to apply a genetic algorithm to select the recommended index.

1 44. (Previously Presented) The article of claim 40, wherein the system is a test system  
2 separate from the database system, the instructions when executed causing the test system  
3 to:  
4 import environment information regarding the database system;  
5 emulate an environment of the database system based on the imported  
6 environment information,  
7 wherein the generating, eliminating, invoking, and using acts are performed in the  
8 emulated environment.

1 45. (Previously Presented) The article of claim 44, wherein the environment  
2 information comprises cost-related information, statistics, and random samples from the  
3 database system.

4  
1 46. (Currently Amended) The article of claim ~~[[1]]~~ 40, wherein the environment  
2 information comprises cost-related information, statistics, and random samples from the  
3 database system.
